

Based on the sources provided and our conversation history, the "Notion" source you shared does not contain a cover letter template; it only displays a technical error message stating that **"JavaScript must be enabled in order to use Notion" 1.**

However, I can provide a **Notion-ready layout** based on the **five-step process for writing a winning cover letter** we discussed in our conversation history. You can copy and paste the following structure into a Notion page:

Cover Letter Template: Client Name / Job Title

Step 2: The Hook (The First Two Sentences)

Clients only see the first two sentences before opening your proposal. Make them count.

Personalized Greeting (e.g., "Hi Client Name," - check feedback history for their name)**The Hook** (e.g., "I saw you are looking for Specific Goal. I can help you achieve this by Specific Strategy/Benefit.")

Step 3: Specific Work Samples

List 3–5 highly relevant examples that match the job description exactly.

- **Work Sample 1 Title** - Link/Description
- **Work Sample 2 Title** - Link/Description
- **Work Sample 3 Title** - Link/Description

Step 4: Value Proposition

Address the client's specific needs and show how you stand out from the competition.

- **Key Value 1:** (e.g., "I can deliver X within Y timeframe.")
- **Key Value 2:** (e.g., "I specialize in Specific Skill which will help you solve Client Problem.")

Step 5: Call to Action (CTA)

Suggest a clear next step to move the project forward.

"I would love to discuss your project further. Are you available for a **10-minute introduction call** this week to see if we are a good fit?"

Internal Checklist (Step 1: Finding the Best Job)

- Does this job have **fewer than 15 proposals**?
- Has the client checked the posting within the **last week**?
- Is the work sample list **strictly relevant** to this specific niche?

Important Note: The content of this template is derived from our previous discussion regarding the best practices for Upwork cover letters. The source provided in your query **1** was inaccessible due to a technical error on the Notion page. To use this effectively in Notion, you can simply type / to create headers, callouts, or bullet points for each section.
